Education

Ingeniero en desarrollo de software **2016-2019**  
Universidad Politecnica de Chiapas, Suchiapa.

Experience

Shedcloud **Realhost | 2021-2025**

**Frontend Developer / Designer** with **React JS and TailwindCSS (Present)**

A portal to manage quotes, sales orders, and work orders, as well as create and edit inventory and manage product locations for import and export.

- **Interactive PDF-style Views:** Designed editable views with business logic to generate production-ready documents and send them by email, streamlining contract management and accelerating internal processes.
- **Performance Optimization of Critical Views:** Enhanced purchase order, quote, and work order screens by implementing selective rendering, conditional loading, Redux state management, and reducing API calls — resulting in faster response times and a smoother user experience.

3D Shedcloud **Realhost | 2022-2025**

**Frontend Developer / Designer** with **React JS, Three JS and TailwindCSS (Present)**

A website to configure shed buildings. Users can add and update walls, porches, roofs, building colors, and accessories, as well as create quotes, sales orders, and work orders. The system links each configuration with quotes, sales, and work orders, allowing users to continue editing at any stage.

- **3D Performance Optimization:** Reduced 3D object loading times by 50% through material optimization, removal of unnecessary re-renders, and refined update logic — delivering a smoother and more efficient experience.
- **Walls and Accessories Logic Enhancement:** Implemented new wall-cutting logic for accessory placement, reducing processing time by 80% and enabling faster, more precise element adjustments.
- **Portal Loading Optimization:** Accelerated portal performance through optimized API requests, caching strategies, and proxy-based design patterns — reducing model switching times and enabling near-instant product changes.

Factura tu ticket **Realhost | January - November 2020**

**Frontend Developer / Designer** with **Vue JS, CSS3, Laravel**

A web platform to manage invoices for Realhost's companies. It allows any related company to access the website, add invoice details, and generate completed invoices.

- **Portal Views Design:** Designed all portal interfaces with Vue.js and CSS3, gathering client requirements to deliver user-friendly screens optimized for core user actions.
- **Full Frontend Development:** Led frontend development with Vue.js, Laravel, and CSS3, integrating REST APIs to enable seamless interaction and reliable backend communication.
